App Store

Childhood genital surgery is painful and traumatic, alters sexual experience, and has lifelong consequences. More than a million children suffer it annually in the United States. Yet these surgeries – whether performed on a boy (circumcision), a girl (FGM), or an intersex child (gender-norming) – were not included on the original 10-item ACE questionnaire.

We propose adding to Question #3:

Surgically alter your genitals or circumcise you at birth or later?

Adopting this addition will help to more accurately identify risk from ACEs for millions of Americans.

For your convenience, we have created an online ACE quiz and iOS and Android mobile apps:
