

PRESS RELEASE

Basel, Switzerland, September 30th, 2019.

Hospital Angelina Caron extends the hospital coverage of Clinerion's Patient Network Explorer platform in Brazil.

Hospital Angelina Caron joins the Patient Network Explorer platform, expanding Clinerion's global hospital network in Brazil.

Hospital Angelina Caron, of Campina Grande do Sul, Paraná, is the latest Brazilian hospital to join Clinerion's network of partner hospitals on its Patient Network Explorer platform. Hospital Angelina Caron has nearly one million patients and specializes in cardiology, ophthalmology, pediatrics and neonatology, gynecology and obstetrics, orthopedics, transplants, obesity and digestive system, oncology, neurology, cardiology, nephrology, vascular and endovascular surgery. The hospital has run 10 international trials per year for the past 5 years.

Clinerion's Patient Network Explorer accelerates drug development, bringing innovative drugs earlier to patients. It helps partner hospitals be visible to pharmaceutical companies seeking suitable patients and sites for their clinical trials. Leveraging patient medical data, queries based on trial protocols may be sent to partner hospitals to assess the count of eligible patients in their electronic health records. All patient data is de-identified and remains under the control of the hospital and inside its IT infrastructure. However, Clinerion's patented technology also enables authorized trial staff at the hospital to re-identify the patient for the purpose of trial recruitment, while maintaining strict personal data privacy standards.

"With the Clinerion database system, there will be a great progress in research at our center, facilitating patient selection and increasing our effectiveness. Today, a database and facilitating access to information are fundamental to the evolution of research", says Dalton B. Precoma (M.D; Ph.D), cardiologist of Hospital Angelina Caron.

"We are so pleased that our patient coverage in Brazil is expanding by leaps and bounds," says Ian Rentsch, CEO of Clinerion. "It shows that the benefits of visibility to pharmaceutical trial sponsors that we offer to hospitals running international clinical trials are well understood and accepted."

About Clinerion

Clinerion accelerates clinical research and medical access to treatments for patients. We use

proprietary technologies for analysis of patient data from our global network of partner hospitals. Clinerion's Patient Network Explorer radically improves the efficiency and effectiveness of clinical trial recruitment by offering data-driven protocol optimization, site feasibility evaluation and real-time patient search and identification to match patients to treatments. Our technology solution provides real-world evidence analytics for medical access. Clinerion facilitates the participation of partner hospitals in leading-edge, industry-sponsored trials and time savings in patient recruitment. We create innovative and disruptive fit-for-purpose solutions which enable pharmaceutical companies to shorten patient recruitment and save costs by streamlining operations and leveraging strategic intelligence. Clinerion's proprietary Big Data analytics technologies leverage real-time data from electronic health records which comply with international patient privacy and data security regulations. Clinerion is a global data technology service company headquartered in Switzerland.
