

Assignar Announces New Integrations With Procore

Connect your project management to subcontractor or self-perform operations management

PRWEB

DENVER – Nov. 20, 2019 – Assignar, a cloud-based construction operations platform for subcontractors and self-perform general contractors, today announced an integration with [Procore](#), a leading provider of construction management software, to enable contractors to connect their project management to subcontractor or self-perform operations management.

Assignar's platform helps self-perform contractors and subcontractors manage the job site schedule across multiple projects, crews, equipment, safety, and compliance. They currently serve the needs of heavy civil, road, rail, traffic, utility and other types of construction contractors across North America and the APAC region.

"Assignar's new integration with Procore brings the power of their deep functionality for self-perform operations to Procore's construction management platform," says Eric Tucker, Business Development Manager at Procore. "We are excited to partner with Assignar to further our mission of connecting everyone in construction on a global platform."

The combined solution of Procore and Assignar provides construction professionals with the ability to coordinate changes between the office and field operations across project initiation, drawings, RFIs, work orders, field forms, and more.

"We built the Procore integration to keep self-perform contractor teams working seamlessly. From the operations team to the project management team, everyone should have visibility into the right information from anywhere, on any device," said Fatima Howes, VP of Product at Assignar.

With Assignar's field capabilities and Procore's robust project management capabilities, general contractors can now seamlessly communicate and observe their subcontractors across multiple projects.

"This is exciting news for us! We work with a lot of contractors that use Procore, and the integration will be hugely beneficial to our business and efficiency," said Helen Madden-Weiss, President & CEO of NPW Contracting. "We cannot wait to see it in action!"

About Assignar

Assignar was founded in 2013 as a provider of construction operations management software for subcontractors and self-perform general contractors. The Assignar platform is a cloud-based SaaS platform built to help construction contractors improve by providing end-to-end, real-time management of a company's workforce, assets, safety, and compliance. The company's clients operate in road, rail, civil, commercial, mining, oil and gas, infrastructure and other construction disciplines, and include companies like UGL, Lendlease, Sydney Trains, and Liebherr, among others.
