

Propylon® Announces Successful Implementation of Its LWB 360 Legislative Software Solution for Michigan Legislature

Propylon Worked in Partnership with Michigan Legislature Team to Create, Develop, and Implement a New Bill Drafting and Chamber Automation System

NEW YORK, November 22, 2019 -- Propylon® today announced the successful deployment of its legislative software solution for the Michigan legislature, which replaced an outdated and aging bill drafting and chamber automation system. The LWB 360 application went live in August, offering immediate benefits to Michigan's legislative processes.

Working in collaboration with the Michigan Legislature House, Senate, and Legislative Service Bureau (LSB) team, Propylon designed and developed a custom-built legislative software solution with the goal of streamlining processes to minimize system risks and increase system efficiency.

"Our collaboration with the Michigan legislature team has been a flourishing partnership resulting in the successful delivery of a truly integrated bill drafting and chamber automation system," said John Harrington, CEO of Propylon. "The foresight and commitment to invest in building a strong platform capable of managing the legislative process for the next 20 years and beyond is not only a credit to the Michigan legislature management team, but a model to emulate."

Propylon's LWB 360 application, which was successfully deployed in August following an eight-month phased implementation process, provides a single, centralized source of data between Michigan's House, Senate, and LSB. This allows information to flow with ease between departments, increases accuracy, and ensures that existing procedures, rules, and confidentiality remain in place.

Utilizing Propylon's modern, user-friendly tools, legislative staff can benefit from increased efficiency through the automation of tasks that were previously manual, the elimination of data re-entry between departments, and the simplification of workflow processes.

"Our working collaboration with Propylon has been critical to the success of this project, ensuring that the knowledge within the Legislature was fully utilized when building the new software system," said Doug Simon, Business Director and CFO at Michigan House of Representatives. "Co-innovating with a vendor that understands the intricacies of how a legislature works as well as the importance of supporting the State legislative IT staff so that they can independently manage the system was one of the key success factors in this project."

Following rigorous software testing and staff training in new processes, the successful implementation of Propylon's legislative solution allows for greater efficiency, enhanced functionality, and more streamlined procedures while paving the way for future enhancements to the legislative process on a consolidated technological foundation.
