# MyOnyx: Portable & Wireless

Operates with a mobile app or PC software

## Designed by therapists for therapists

- ✓ Implementing the best evidence and current concepts of motor learning, neuroplasticity, and patient centered care and engagement
- ✓ Setting the stage for the clinician to bring their own knowledge and expertise into the treatment, rather than offering a one-size-fits-all solution

MyOnyx gives you quick and easy access to a wide variety of modalities, with state-of-the-art advanced features:

### Electrostimulation

4 channels of fully customizable powerful stimulation

### SEMG

Surface Electromyography: 2 channels of 2048s/s raw signal. A plethora of feedback types and options: games, music, and animations. Simple or detailed reviewing, editing and reporting features. Measure patient muscle activation efforts, and teach relaxation, activation or fine motor control with the power of Biofeedback

### ETS

EMG-Triggered Stimulation: state of the art modality allows patients to start a task actively, and be assisted by electrostimulation once reaching a set threshold, thereby rewarding effort with movement and promoting neuroplasticity
