## **AUTORABIT ACHIEVES SOC 2 TYPE II COMPLIANCE CERTIFICATION**

*Certification Demonstrates AutoRABIT's Leadership in Higher Industry Security for DevOps*

**San Ramon, CA** – AutoRABIT, a leading provider of enterprise-class, metadata-aware DevOps and release management solutions, has achieved the Service Organization Control (SOC 2) compliance certification, an attestation standard defined by the Association of International Certified Professional Accountants (AICPA), reinforcing the company's commitment to security best practices. The certification demonstrates AutoRABIT's continuous commitment to the most rigorous security standards for its operations and handling of customer data. AutoRABIT is the first software company in the DevOps for Salesforce space to achieve this designation.

AutoRABIT had previously achieved ISO 27001 ([link](#)) & SOC2 Type 1 certifications in 2019. The certification was issued by an independent third-party firm that verified AutoRABIT's process and controls met the Trust Services Principles standards for security, availability, processing integrity, and confidentiality. The firm tested the operational effectiveness of controls and confirmed AutoRABIT's commitment to security.

"AutoRABIT is the first Salesforce DevOps and release management solution to secure the SOC2 Type II certification. Our customers and partners can be certain that maintaining confidential customer data is our highest priority," said Vishnu Datla, CEO of AutoRABIT. "Within the Trailblazer Community, there has been a rise in demand for security (DevSecOps). As market leaders, we started the SOC2 certification journey to assure security, privacy, and process controls of our cloud services to give our customers confidence their code and data are secured end-to-end. And that is currently not available in the market today."

### **About AutoRABIT**

AutoRABIT offers a suite of products to automate CI/CD and data and metadata Backup processes for Salesforce. The Automated Release Management (ARM) Suite for Salesforce allows teams to configure, build, test, and manage development, environments, and deployments on their Salesforce instance. Vault Data Backup and Recovery enables continuous backup as part of the CI/CD process. AutoRABIT's Metadata Mastery™ is a proprietary technology developed to manage the dependencies, profiles, and relationships associated with Salesforce metadata. Visit [autorabit.com](http://autorabit.com) for more information.
