Methodology:

Respondents for this survey were selected from among those who have registered to participate with Lucid partners. The goal of the survey was to collect 100 responses of adults between 18 and 39 years old, balanced by gender, in 20 countries. The survey was translated from English and available in Arabic, Chinese (Simplified), French, German, Italian, Korean, Portuguese, Romanian and Spanish (Spanish and Spanish Latin). In order to allow for comparisons, countries were weighted to the same gender (50% male, 50% female), age (52% 18-29, 48% 30-39), and education (25% less than college graduate, 50% college graduate, 25% graduate or professional school graduate) distributions. Because the sample is based on those who initially self-selected for participation in the panel rather than a probability sample, no estimates of sampling error can be calculated. All sample surveys and polls may be subject to multiple sources of error, including, but not limited to sampling error, coverage error, and measurement error.
