PRODUCT INFOSHEET

Akkadian Contact Manager™

New – LDAP source with authentication proxy support
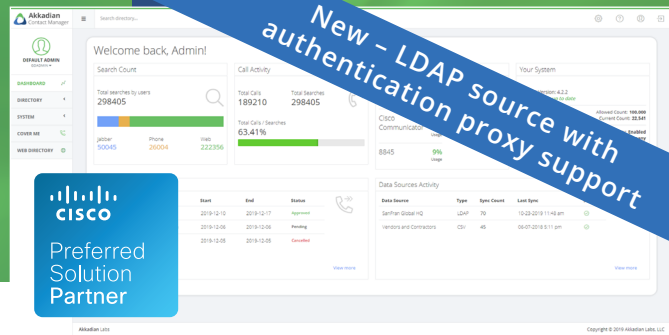

The New Standard in Company Directories

Our enhanced directory helps employees quickly find who they need, through a simple yet powerful interface, available across multiple devices (including iOS/Android phones). It solves the telephony engineer's data challenge of multiple data sources and formats— which make it difficult to create a useful company directory.

- **Unified, user friendly and customizable** — a web-based contact manager with a simple interface
- **LDAP Compatible** — use as a LDAP directory for CUCM which you control and as an authentication proxy for multiple AD sources
- **Flexible integrations** — aggregates contacts from different sources (CUCM, LDAP, CSV, SQL and MySQL)
- **Dial rules** — for global organizations with single, multi-cluster or multi-tenant environments — combining it all so it looks like one transparent directory
- **Custom search fields** — search for more than just name. Easily search on business criteria (skillset, badge number, title, etc.)
- **Predictive search functionality (T9)**
- **Secure** — secure external access; no data stored on devices

Benefits

- Improved collaboration/ productivity
- More seamless communication
- Reduced frustration due to inaccurate or incomplete directories
- Maintaining directory integrity during phone system migration

Use Cases

- Most Cisco IP phones
- Mobile devices (iOS/Android)
- Web browser
- Cisco DX video endpoints
- Jabber

A Simple and Powerful Directory to Find Who You Need Faster

Dec19

Key Features

Unified Directory
Aggregate contacts from different sources, including: CUCM, LDAP, CSV, SQL and MySQL.

Authentication Proxy
Users can authenticate into UC apps redirected to the correct AD server.

Can act as a LDAP Source
Use as a clean, manageable LDAP directory aggregating contacts from multiple AD servers.

Administrator Dashboard
Manage the directory via a web-based dashboard and advanced reporting.

Dial Rules
Easily manage directories for a global organization or in a multi-cluster environment.

Real Time Updates
Snyc directory data on demand, or on a schedule. See changes as you make them.

Customized Search Fields
With a click of the mouse, IT admins may customize search field formatting.

Photo Server Capabilities
Import photos from LDAP or URLs through CSV file and other data sources.

E164 Number Formatting
Simplified dialing across web, mobile and Jabber.

Custom Branding
Web Directory branded to reflect company logo and colors.

System Requirements

Deploys as a self-contained virtual appliance

- VMWare ESXi 5.x+
- 2GB or greater RAM
- CUCM version 10+
