FINAL Release: APPROVED for distribution

Kokomo Solutions, Inc. Announces COVID19Tracker™ Cloud Software FREE to Communities, Schools, and Healthcare Systems powered by its Kokomo24/7® Safety Cloud™

Kokomo Solutions Inc. announces the first of its kind: a cloud software called the COVID19Tracker™ to help communities in the challenges of collecting reports, tracking and management of the critical Coronavirus COVID-19 cases.

COVID19Tracker™ is a cloud-based safety solution in mobile apps and web portals with case management, communication, and collaboration features. Designed to help provide situational awareness, report, track, and manage Coronavirus cases within schools, communities, healthcare systems and workplaces across the nation, COVID19Tracker™ is comprised of 3 cloud solutions powered by commercially available software, Kokomo24/7® Safety Cloud™.

Kokomo24/7® Safety Cloud™ is a Software-as-a-Service product that ensures safe environments for schools, communities, and workplaces through an easy-to-use, intuitive set of safety applications designed to give communities, local governments, schools, and health administrators the proactive insight and capability to manage coronavirus cases.

At the heart of Kokomo24/7® Safety Cloud™ is a proprietary A.I. Engine that gives administrators analytical data to help determine the probability of reported cases for proactive intervention. Incident Management System (Kokomo24/7® - IMS) provides a proactive approach to respond to and recover from incidents in a repeatable methodology. With the Anonymous Reporting System (Kokomo24/7® - ARS), communities, students, parents, and employees can submit health and safety concerns from a mobile app or website portal. These reports will be triaged by an A.I.-based TruScore™ scoring system. The data in TruScore™ is designed to help manage false positives and more precisely identify at-risk individuals and incidents. Kokomo24/7® Emergency Operations Center (Kokomo24/7® - EOC) provides emergency operation centers and safety officials with instant situational awareness so emergencies are thoroughly coordinated and managed with informed decisions. Additionally, the Emergency Operations Center (EOC) module provides communications across schools, local governments and emergency responders, and full resource management (HR, EQ, and Financial).

“We all have loved ones who we care immensely for. Advocating public safety is the very core of what Kokomo24/7® stands for. It's our duty to provide communities with the means to deal with this issue head-on,” says Daniel J. Lee, CEO, and founder of Kokomo Solutions. *“Our goal is to expand our footprint in the public to help other communities across the country embrace the benefits of cloud technology for improved health and safety.”*

COVID247.org provides a deeper dive into Kokomo Solutions' reasons behind the importance of launching the COVID19Tracker™. With the ever-increasing numbers of the Coronavirus around the world and more medical crises like it to come in the future, regarding the limited resources within communities, schools, and workplaces, Kokomo Solutions sees the usefulness behind their technology. Our solutions can be implemented in a matter of a few days because our Kokomo24/7® Safety Cloud™ is a cloud-based and agile. No hardware, an intuitive user interface, and a seamless setup. That's how Kokomo Solutions was able to launch COVID19Tracker™ as soon as it learned the first case of death from the virus in Washington state.

Kokomo Solutions has deployed the Kokomo24/7® Safety Cloud™ at the second-largest school district in America. This school district uses Kokomo24/7® Safety Cloud™ to provide their district resources, and entire communities with scalable safety solutions that offer security to compliance standards supported with the latest technologies built on the most reliable cloud provider, Amazon Web Services.

About Kokomo24/7®

With deep public safety experience, Kokomo Solutions, Inc. is the company behind a cloud-based safety platform that helps educators reduce unsafe student incidents to ensure higher quality learning environments? The Kokomo24/7® Safety Cloud™ platform consists of three modular and easy-to-deploy, intuitive safety solutions designed to help reduce disruptive and harmful events in communities and schools. Incident Management (IMS), Anonymous Reporting (ARS) and Emergency Operations Center (EOC) comprise the platform to bring to community and school district leaders unprecedented visibility to the safety and well-being of their citizens and students.
