

phoenixNAP Bolsters Data Security Cloud with Alert Logic Managed Detection and Response

phoenixNAP integrates Alert Logic MDR into its secure cloud solution for enhanced risk assessment and cyber attack protection

Phoenix, AZ, Apr 7, 2020 – phoenixNAP[®], a global IT services provider offering security-focused cloud infrastructure, dedicated servers, colocation, and specialized Infrastructure-as-a-Service technology solutions, today announced a collaboration with Alert Logic, the industry's first SaaS-enabled managed detection and response provider. This partnership will expand phoenixNAP's Data Security Cloud (DSC) to include Alert Logic's market-defining managed detection and response solution, enabling quicker threat detection, an enhanced ability to respond to security incidents, and complete and continuous monitoring of an organization's attack surface.

Data Security Cloud is phoenixNAP's compliance-ready cloud solution built for organizations that require advanced security or operate under strict regulatory requirements. Using industry-leading hardware and software technologies, DSC provides core protection against Advanced Persistent Threat (APT) and zero-day vulnerabilities, while ensuring exceptional performance. Alert Logic's managed detection and response capabilities add a valuable security layer to the solution, providing a unique combination of award-winning SaaS security platform, continuous threat research and analytics, and 24/7 security experts.

"Alert Logic enabled us to add critical capabilities to our Data Security Cloud and make it even more powerful in addressing the needs of modern organizations," said Ian McClarty, President at phoenixNAP. "Given that many businesses do not have the resources or knowledge to implement the right protection, DSC solves their challenge by providing easy and affordable access to enterprise-grade technologies. Alert Logic builds upon that value proposition by providing 24/7 security experts for full visibility across an organization's IT assets, enabling businesses to meet even the most sophisticated security and compliance goals."

Data Security Cloud is delivered on an OpEx model, enabling medium sized businesses to access enterprise-grade security technologies at an affordable price point. It is available in two subscriptions: Essentials and Advanced.

"phoenixNAP provides superior data protection to its customers through a highly secure, state-of-the-art cloud infrastructure platform, bringing mid-sized and other resource constrained businesses the kind of security typically afforded only to large enterprises," said Bob Lyons, CEO, Alert Logic. "The partnership with Alert Logic enhances phoenixNAP's ability to detect and respond to cyber threats, helping security teams bridge gaps and reduce the likelihood or impact of successful attacks."

On April 16, phoenixNAP and Alert Logic will partner for a webinar: "How to Recognize Cyber-Attack Symptoms and Ensure Infrastructure Health." In the webinar, Alert Logic's Jack Danahy, SVP and Chief Evangelist and phoenixNAP's William Bell, SVP of Product will discuss the new partnership and why

managed detection and response is best positioned to help companies address their cybersecurity skills gap and today's increasingly complex threat landscape. To register to attend the webinar, [visit here](#).
