PRESS RELEASE

“COVID Decontamination Service Company First to Deploy Medical Grade Sanitizing Equipment for Local Businesses”

LOS ANGELES (April. 15, 2020)—CR Environmental LLC is deploying medical level COVID decontamination service to sanitize businesses in Valencia, California. This is the first time this hospital grade sanitizing equipment is being used on local businesses.

CR Environmental is a IAC2 certified remediation company that offers COVID sanitation cleaning services for businesses to reduce their risk when reopening to the public.

The COVID decontamination process employs an EPA approved fog solution that leaves no toxic residue with no rinsing required. The equipment delivers a predetermined amount of mist based on the room size. This EPA registered solution has a 99.9999% efficacy rating against COVID and other difficult to kill bacteria. The efficient system is lab proven to decontaminate everything the mist touches. This advanced method is better than traditional hand cleaning methods.

CR Environmental LLC specializes in non-toxic and non-VOC mold removal techniques that protect current and future occupants of the buildings they treat.

“In this critical time of reopening businesses, it is important that we protect the community we serve. Deep decontamination of public places and businesses is going to be paramount during this ‘re-opening’ process,” said Carl Reese the CEO of CR Environmental LLC.

Reese has been a repeat guest on Fox Business News with Liz Claman and has set multiple Guinness World Records to bring awareness to veterans and first responder charity called the Motorcycle Relief Project a 501(3)(c)

Tom Delgado, the company Field Operations Officer says, “The service is new to the Santa Clarita Valley but the decontamination process has existed for over nine years. The methods and equipment used to decontaminate hospitals and medical facilities worldwide.”

###
