

HEALTH PRODUCT DECLARATIONS (HPD)

This quick guide gives an overview of the most important product declarations related to customer health as relevant to our business operations.

An HPD is a product declaration which shows detailed listings of materials and contents of a given building product and related effects on human health, whereby it is assessed if particularly concerning chemicals are contained in the products. HPDs were developed by HPD Collaborative with a view on appraising potential health hazards of materials. This standard offers a coherent reporting format, in which quality and availability of product and health information is assessed.

HPDs are self-declared. They are a globally recognized industry standard, which are requested by investors, architects, planners and building management companies.

HPDs thus emphasize the manufacturer's commitment to disclose product information in a transparent manner. HPDs are also recognized by the green building certification system LEED.

The HPDs as well as the Declare Labels are used by major North American architectural and engineering firms as the basis for tenders and specifications to design sustainable buildings all over the world.

Modernfold proudly offers HPDs for the following products:

Movable Walls

- Acousti-Seal[®] Encore
- Acousti-Seal[®] Legacy (930 Series)
