### Dynasty Introduces New Technology the Predator® Multi – Casing String Section Mill

May 25<sup>th</sup>, 2020. HOUSTON – ([BUSINESS WIRE](#)) - Dynasty announced today that it has successfully designed, manufactured and brought to market its new proprietary multi – casing string section milling technology the **Predator®**.

**Predator®** patent - pending new section milling and cutting technology was developed to meet the industry need for efficient and cost-effective section milling through multiple casing strings in P&A applications to mitigate sustained casing pressure. The very team that invented and brought to market the current section milling technologies in use today with The **Predator®** has delivered 11- points of engineering change making current technologies obsolete focusing on durability, faster ROP and reliability.

The **Predator®** introduces several “Firsts” in the industry such as (1) the ability to circulate through the entire ID of the tool making swarf management much easier and (2) the **Predator®** energizes from the bottom up making it truly unique in design and function. The **Predator®** can be run from a conventional rig, rigless or from snubbing units with mud motor drive. Not damaging outer casing strings while milling inner casing strings is a signature benefit of the **Predator®** tool which is critical to cost effective, permanent P&A operations. Add to that, larger body OD, enhanced material specifications, higher tensile strengths, No pistons, vents, multiple jetting options, expansion capability and ROP performance and it’s easy to see why the **Predator®** makes all other section milling technologies obsolete.

“The **Predator®** is a new technology, a step change in design & function to current section milling technologies on the market by that the **Predator®** addresses all of the current market section milling inefficiencies with a new approach to engineering & design functionality.....we really did build a better mouse trap with The **Predator®**.” – said Jason Parrish, VP Sales & Marketing for Dynasty Energy Services.

“We will continue to focus on execution for our customers and to support the industry to lower P&A liabilities through cost reductions and the **Predator®** does that by bringing step change in section milling functionality and value creation.” – said Keith Alexander, Executive VP & COO for Dynasty Energy Services

#### Corporate Profile

**Dynasty Energy Services** is the global leader in specialized fishing, multi - casing string section milling, plug and abandonment service technology companies. Dynasty’s **Predator®** technology significantly reduces the cost and time of plug and abandonment operations and leads to permanent barrier placement, delivering a definitive sealed wellbore at the end of its productive life. Dynasty has the most experienced and recognized team of experts in finding solutions to downhole challenges and currently holds more than 30 patents covering specialty tools and methods used in Fishing, Conventional, Rigless and Thru Tubing P&A.
