Help Subscribers Work from Home

Easily connect **VoIP Phones** using **PoE Powerline**.

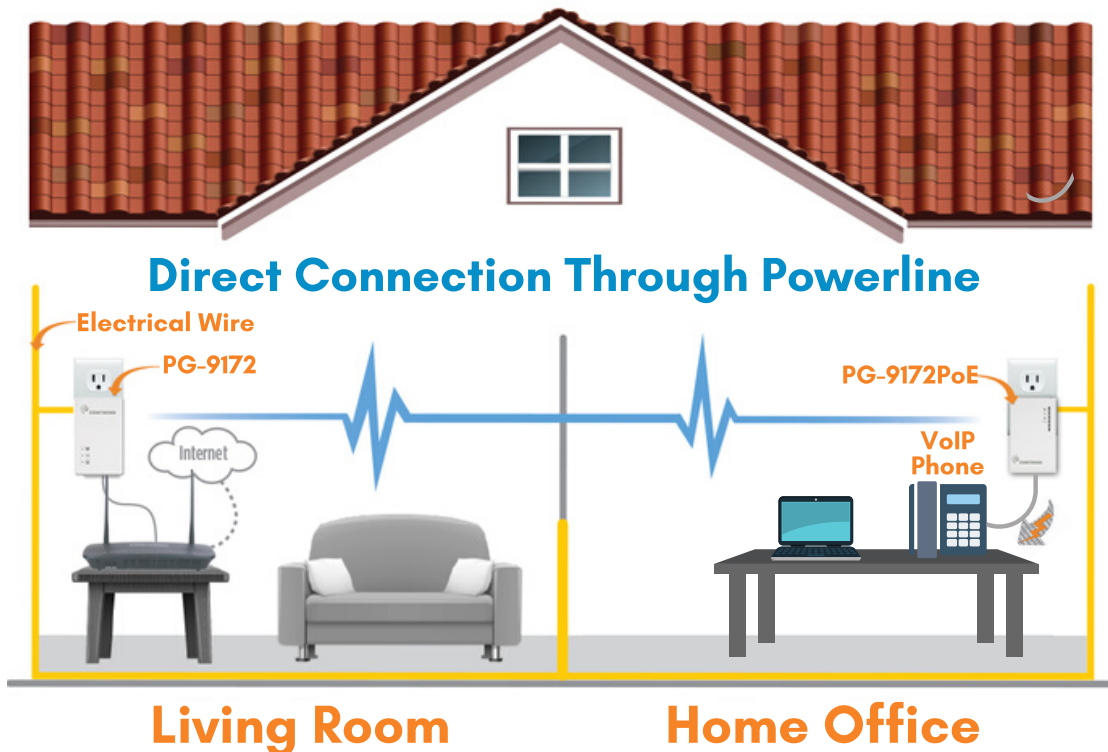

As we continue to follow social distancing guidelines, it means that people are working from home for the first time. Sometimes these homes are not ideally setup for a work-from-home scenario.

In cases where your subscribers need to connect their **VoIP Phones**, our **Powerline + PoE adapter** is a fast and flexible solution.

Using Powerline + PoE to Connect VoIP Phones

Our G.hn Powerline + PoE Adapter, the PG-9172PoE, delivers both power and data anywhere there is an outlet.

How It Works

Help Subscribers Work from Home

Request a sample!

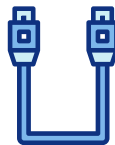

Setup is Simple

Subscribers can easily be sent kits to self install. This maintains the safety of technicians.

G.hn is the newest standard in Powerline

G.hn technology delivers unprecedented reliability in Powerline networking.

Eliminate Unsightly Ethernet Cable

Instead of running a long Ethernet cable from the gateway to the VoIP phone, Powerline uses the existing electrical wiring to bring connectivity as close as the nearest outlet.

Enable Subscribers with Internet Management

Traditional education has transitioned into "distance learning" in order to meet social distancing guidelines. This has resulted in more kids on more screens than ever before.

Give subscribers advanced parental control tools, and more, to monitor kid's Internet usage while distance learning.

Using a Comtrend Router + Router Limits

Together, select Comtrend gateways and Router Limits' Internet Management software enable a robust managed service offering including parental controls and network monitoring.

Comtrend + Router Limits

- With the Router Limits App, **every connection is protected** whether kids are connecting from their home WiFi, neighbor's WiFi, hotspots, or mobile data.
- This kind of service will become increasingly important as distance learning continues.
