

D3 Security and Check Point Software Partner to Help Customers Respond to the Next Generation of Cyber Threats

D3 NextGen SOAR integrates with multiple Check Point products

Vancouver, BC—June 25, 2020—D3 Security, the leader in next-generation security orchestration, automation and response (SOAR), today announced a new partnership with Check Point Software Technologies Ltd., a leading provider of cyber security solutions globally, to help security teams automate and orchestrate response to the next generation of cyberattacks. The partnership features integration between D3 NextGen SOAR and multiple Check Point products, bringing together best-of-breed technologies to rapidly validate and disrupt even the most advanced cyberattacks.

D3's integrations include Check Point SandBlast and Next Generation Firewall (NGFW). Customers can now use D3 to automate critical enrichment and response actions, including MITRE ATT&CK-based correlation and surveillance, enabling proactive response to today's fast-moving cyberattacks. D3 has also joined the Check Point Technology Integration Program.

"The integration between D3 and Check Point helps customers combat modern cyber threats, which are highly dynamic and evasive," said Gordon Benoit, D3 Security President. "By combining Check Point's and D3's solutions, customers can automate and scale incident response workflows and dramatically reduce dwell and response times."

"Check Point's integration with D3 NextGen SOAR helps customers rapidly respond to threats against on-premise networks, endpoints, cloud and mobile. We are pleased that Check Point and D3 Security customers can have real-time alerts and threat intelligence acted upon quickly," said Itai Greenberg, VP of Product Management at Check Point Software.

Unlike traditional incident response, which requires manual coordination, the integrated approach enabled by D3 and Check Point combines alerts and threat intelligence with fast-acting playbooks for the validation, conviction and remediation of threats. This unified *detect-and-respond* model helps security teams see beyond the individual stages of a cyberattack, allowing for improved decision-making and faster remediation of advanced cyberattacks.

About D3 Security

D3 Security's NextGen SOAR Platform is the first and only "SOAR 2.0" platform that combines automation and orchestration across 260+ integrated tools with the proactive response capabilities of MITRE ATT&CK. D3's codeless playbooks bring enrichment, analysis, and remediation together, making it easy for anyone to build, modify, and scale workflows with no Python coding required. With hundreds of product integrations and built-in security expertise, customers can reduce MTTR by up to 99% and improve both the speed and quality of their security operations, incident response, and threat hunting.
