APA Virginia Webinar to Highlight Versivo's Plan Review Implementation

Free webinar will take place on July 27th, Noon - 1 p.m

Versivo and Arlington County have partnered with the American Planning Association (APA), Virginia Chapter to produce a [webinar on Transforming the Customer Experience](#) using Hyland's [OnBase Plan Review](#) solution. The solution combines an external portal for plan submission with an internal dashboard to manage staff assignments and deadlines. Utilizing electronic workflow and digital plans results in easy-to-see review statuses, accurately tracked assignments, and timely reviews. The solution provides real-time collaboration on a single file, with mark-ups and comments visible to all reviewers, and is fully integrated with the County's Permitting System.

The webinar will be presented by Deborah Albert, AICP, Permit Arlington Program Manager and Brian Hyatt, Director at Versivo, and will include the following topics:

- Introduction to Arlington County and the Permit Arlington program
- Planning, entitlement, and public process overview
- Plan Review System Features and Functions
- Challenges and Lessons Learned
- How other Localities can get started quickly
- Q&A

"We are thrilled to be sharing Arlington County's success story with the APA Virginia Community and localities across the nation," said Brian Hyatt, Director of Client Services at Versivo. "This webinar will help demonstrate the impact of a powerful Plan Review solution. Localities are moving critical processes online, now more than ever, and Plan Review just cannot continue to rely on paper plans and disparate processes. OnBase, Versivo, and Arlington County transformed the plan review process with one solution for submission, process management, collaboration, version control and long-term storage, along with all the necessary engineering tools you need to measure, markup, and comment on plans. Versivo is proud to have implemented this solution as part of the Permit Arlington program, leveraging the County's continued investment in OnBase for records management and workflow."
