

-- FOR IMMEDIATE RELEASE--

## **GTA Adds ClearSky's iCODE® A2P Messaging Service to Enable Subscriber Text Messaging with Thousands of Companies**

*GTA, a leading provider of cellular service in Guam, has implemented ClearSky's iCODE® A2P Messaging Service to enable subscribers to access a vast array of services through text messaging. The iCODE cloud-based service enables GTA subscribers to use Application-to-Person (A2P) text messaging to interact with over 10,000 businesses and organizations ranging from neighborhood businesses to worldwide companies like Google and Facebook.*

ORLANDO, FL, August 18, 2020— ClearSky Technologies, Inc., a leader in Application-to-Person (A2P) message services to mobile network operators and Internet-based text messaging providers, announced today that GTA, one of the leading telecommunications providers on the island of Guam, has launched ClearSky's iCODE® A2P Messaging Service. With iCODE, GTA subscribers now have access to more than 10,000 local, regional and national interactive text messaging services.

A2P messaging has become a vital tool for personal shopping, finance, and security, with uses as diverse as banking alerts, social media updates, purchase notifications, and two-factor authentication (2FA) for securing logins. Also, because the iCODE® A2P service is connected to all the major U.S. A2P aggregators, GTA will have immediate access to a continually increasing list of exciting and useful A2P services.

Andrew Gayle, COO of GTA, said, "Our subscribers expect and deserve access to the same A2P services as subscribers of other large US carriers. We have worked with ClearSky in the past, and once again they have provided a subscriber-focused product that makes GTA the best choice for wireless service in Guam."

"GTA is constantly looking for ways to improve the subscriber experience," stated Ron Willet, President of CMS for ClearSky. "They recognized a subscriber need and worked diligently with ClearSky to satisfy that need, as they always do. GTA is the definition of a world-class wireless operator that puts their customers first."

### **About ClearSky Technologies, Inc.**

For more than a decade, ClearSky Technologies, Inc. has been a leader in providing innovative "Infrastructure as a Service" solutions to mobile network operators and now

brings this same expertise to enterprises of every type and size. Named one of the “Top 10 Most Promising Wireless Technology Providers of 2020” by CIO Review Magazine, ClearSky’s powerful array of products and services include turnkey private LTE networks, Forte Neutral Source™ in-building cellular, iCODE® Application-to-Person messaging and Total Traffic Manager™ network policy management.
