# COVID Survey System

DiRAD's COVID Survey System is an easy-to-use, web-based tool that provides a non-intrusive view into the health of your staff, customers, students, and residents who are entering your locations. Using just a few questions, you can assess a user's COVID risk and take immediate action based on survey results.

Features

- Create telephone and text message surveys to assess COVID risk for people entering your facilities, and provide further directions to anyone who may be a risk

- Outbound survey function allows text messages and calls to be scheduled to large groups of users, which provides a snapshot of disease risk across the organization

- Intuitive web interface lets you quickly create new surveys, run reports, and manage users

- Text Message Surveys stay on device, or can be directed to a web address

- Available integration with back-end data sources and business intelligence applications

- Available in many different languages

Benefits

Dramatic cost savings, with no need to post personnel at facility entrances

Provides the organization with **up-to-date information** regarding COVID exposure risks among its population

Increases **accountability** and encourages staff to be mindful of day-to-day exposure risk
