

**20+Mbps 2-WAY DATA
CONNECTIVITY ANYWHERE
EVEN IN AIRCRAFT**

**INDUSTRIAL IoT DATA THAT
GOES THE DISTANCE**

SqwaQ delivers reliable connectivity for both fixed and mobile Industrial IoT applications. We empower new capabilities that save your operation time and money.

Q About Us

THE SQWAQBOX

Our patented, multi-redundant comm-link combines up to twelve 3G/4G/LTE RF modules, each with Dual-SIM slots. Use one network or multiple networks together. All data is prioritized by your preference, then optimized, encrypted and scrambled.

NATIONWIDE COVERAGE

A single LTE connection is not fast enough and does not provide redundancy for high bandwidth applications. SqwaQ can provision services across one or many different networks to deliver the best coverage for your needs. We are building the MVNO service on which B2B and M2M customers can build high-bandwidth, redundant, intensive IOT solutions.

EXPERIENCED TEAM

Our team has decades of telecommunications experience. Each of us has "been there and done that" before. Call us to discuss your custom projects or unique integration plans.

Q What is Prioritized Bonded 4G-LTE? PB4G™

SqwaQ has more than a dozen patents both issued and pending on our PB4G™ technology. Our powerful solution aggregates multiple cellular connections, then prioritizes, encrypts, and scrambles your data transmission according to your needs and preferences. This provides a workhorse for massive throughput and redundancy with the flexibility to prioritize data transmission according to importance. SqwaQ liberates fixed and mobile Industrial IoT users whether you are on the move, in a rural environment or in an aircraft at 5,000ft.

Q What we do

SqwaQ is both an SD-WAN company and MVNO (Mobile Virtual Network Operator). Our patented technology enables access to our customizable network services. Through our strategic partners, SqwaQ can provision custom data services on over 600 networks in more than 130 countries worldwide.

Fixed and mobile Industrial IoT applications require robust connectivity in rural, isolated and often times extremely remote or hostile environments. In today's world, connectivity drives productivity and this is where SqwaQ excels. Our ability to provision redundant high-bandwidth solutions almost anywhere will liberate your remote and mobile IoT operations.

VERTICAL MARKETS/CAPABILITIES

OIL & GAS

Enable lower inspection costs and real time decision making with reliable bandwidth in remote areas. Upstream, midstream, and downstream solutions available.

AVIATION & DRONES

Connect drones, helicopters and light fixed-wing aircraft with 2-way broadband that can stream multiple cameras nationwide.

ENERGY & UTILITIES

Perform lower cost inspections via drones with unlimited range BVLOS flights and real time, nationwide video transmission.

REMOTE SECURITY

Stream motion activated video and triggered events from remote locations to monitor and respond from one central office.

AMBULANCE & TELEMEDICINE

Securely broadcast VoIP, video and medical sensor data from remote scenes to the hospital for live sessions with doctors.

SMART AGRICULTURE

Improve farming and smart ag applications with robust IoT for connectivity, automation and remote monitoring.

CONSTRUCTION SITES

Monitor security and progress in real time with multi-camera, remote video streaming and onsite Wi-Fi for workers.

GOVERNMENT DOD & DHS

Provides remote bandwidth that is cheaper than satellite and supports video with scramble encryption and AI. Private backhaul available.

600+ Global Cell Networks
