## EIZO Releases Frameless 23.8-inch LCD Monitors with Features for Contributing to Sustainable Development

EIZO Inc. announced today the release of the 23.8-inch FlexScan EV2460 LCD monitor with a frameless design for business environments such as trading rooms, back offices, and control rooms. The Ev24460 features environmentally friendly specifications to help companies achieve their sustainable development goals, which are becoming more recognized worldwide.

FlexScan EV2460

The FlexScan EV2460 is the successor model to the FlexScan EV2450 and uses a 23.8-inch LCD panel with 1920 x 1080 native resolution. The monitor implements LED-backlit IPS (in-plane switching) panel technology with 178° wide viewing angles.

EIZO developed the monitor without flame retardant in the plastic body to improve recyclability as part of its efforts to maintain environmentally responsible manufacturing. EIZO also uses recyclable packing material for the boxes the monitor are shipped in.

Furthermore, EIZO incorporates its EcoView technologies to cut down on power consumption without the end-users additional effort. EcoView Optimizer 2 saves power by fine-tuning the balance between brightness and gain according to the screen's content. Auto EcoView automatically adjusts the screen's brightness in accordance with changes in the ambient brightness to trim power usage while reducing eye fatigue. With these technologies, typical power consumption is reduced to as little as 10 watts on the EV2460 – up to 40% less compared to display at maximum brightness.

The monitor is certified by worldwide comprehensive sustainability certifications such as TCO Certified Generation 8 and EnergyStar. According to ESG (environmental, social, and governance) investment or SDGs (Sustainable Development Goals) policy, this provides evidence to companies that need to verify conformance with their procurement requirements.

The FlexScan EV2460 is equipped with four USB 3.1 Type-A ports, respectively. Allows users to conveniently connect devices, such as a mouse, keyboard, or headset, directly to the monitor rather than the PC.

# Press Release

The latest version of EIZO's proprietary software, Screen InStyle, allows users to save individual settings reflected automatically in the connected monitor. This is useful for connecting laptops to a shared monitor such as those used in hot-desking or shared workspaces, providing enhanced comfort and work efficiency.

## **Additional Features**

- DisplayPort, HDMI, DVI-D, and D-sub inputs EV2460
- Flexible stands with 140 mm height adjustment, 35 degrees upward / 5 degrees downward tilt, 344 degrees swivel and 90 / -90 degrees rotation
- Eye care functions including flicker-free display and dimming range from 1 cd/m<sup>2</sup>
- Five-year warranty and six-month no bright pixel guarantee

## **Availability**

The EV2460 is shipping immediately with a MSRP \$409.
