

FOR IMMEDIATE RELEASE

Used Haas CNC machines were preferred 54% more than other CNC brands in Q4 2020

Sanford, FL (Jan 21, 2020) — For more than 30 years, [Haas CNC Machines](#) has been a global leader in the industry, with a commitment to producing high-quality CNC machines, while providing certified customer and repair services. It's HQ in Oxnard, California hosts the most modern, largest production facility in the U.S. for manufacturing machine tools. It has produced more than 200,000 machine tools since 1988.

Based on their Q4 sales, CNCMachinies.com determined that Haas Automation is preferred by customers up to 50% more than other brands. Part of the data collected was based on the [CNC Machine Price tool](#), which provides users with honest prices for CNC machines.

Haas Automation is known as the biggest machine tools builder in the west and manufactures a line of CNC horizontal machining centers, vertical machining centers, rotary products, and more. Haas also manufactures all of the vital components in-house, offering four main product lines: horizontal machining centers (HMCs), vertical machining centers (VMCs), rotary tables, and CNC lathes, while also offering large five-axis and specialty machines.

With a focus on unique qualities such as affordability, repeatability, durability, and high-accuracy, it's no wonder clients have an affinity with the brand. While others have tried to compete in terms of repair and support programs, Haas Automation has proven to be the best choice.

This may have stemmed from the roots of the company, which was founded in 1983 by Gene Haas, a trailblazer in the industry. Because metal fabrication was still an inefficient, labor-intensive trade, the world needed better machines and processes, which Haas delivered across the world.

He released the world's first automatic programmable collet indexer, the HA5C, which remains popular even to this day. Haas then went on to create many innovative automotive solutions, becoming the biggest machine tool builder in the country.

Curt Doherty, CEO of cncmachines.com mentions, *"We have seen how the growth of demand for used Haas machines every quarter in 2020, even through the COVID-19 pandemic, It remained our top selling brand within our inventory"*

With over 18 years of experience in the industry, Curt has a deep understanding of how to assist manufacturers with technology and has learned the value of CNC machines. Through his dedication and hard work, he has nurtured CNC Machines to become the brand that all manufacturers and machinists can trust. Since 2014, Curt and his team boast more than 500 CNC machines on their website's inventory and have purchased and sold more than 1,000 used CNC machines.

From Haas CNC machines to 10 of the [top CNC brands](#), you can be sure to find what you need at cncmachines.com. Find the right CNC machine to suit any need today by checking out the listings in their vast inventory or by giving them a call. And because there's no such thing as a "one size fits all" solution when it comes to CNC machine tools, having a partner that understands how CNC machines work is a significant advantage.
