Charge Up. Get Paid. More. Better.

ENVIRONMENTAL COMMODITIES (E.G. LCFS, REC)

Regulators like CARB issue sellable credits to owners of clean equipment like electric forklifts, trucks, charging stations, etc. To comply with environmental regulation, gasoline and diesel producers buy these credits. The value of these credits fluctuates based on market dynamics. <u>Unlike</u> other markets, it's difficult and even impossible for most companies to directly participate.

SRECTrade does it all for you. You provide equipment and usage data; SRECTrade increases transaction value, sells and deposits proceeds into bank accounts, while providing detailed information and transaction reports.

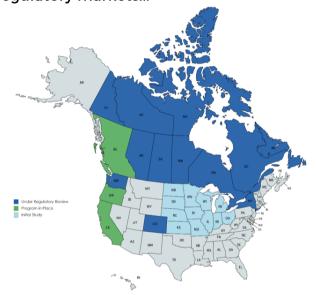

Environmental commodity markets are robust and growing. SRECTrade plugs in to manage and monetize all credit activity and:

- Increase the number of credits issued
- Increase total transaction value and proceeds paid
- Provide online accounts showing asset and transaction activity
- Get paid from proceeds with no invoice/upfront cost
- Keep clients informed and positioned to optimize use of California's LCFS and similar programs now growing quickly across North America.

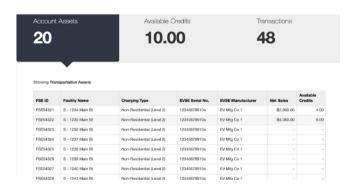

SRECTrade plugs in to manage & monetize credit-generating equipment and programs...

...for companies across geographic and regulatory markets...

...providing online access to asset and transaction information, ongoing market and program updates, and transaction reporting.
