Freedom**

\$2.5M saved

Systemax avoided multi-million dollar legacy technology refresh costs by migrating its SAP system to the cloud with Cintra.

Up to 90% savings

The cost reductions you can achieve by migrating your legacy database technologies to modern alternatives.

Database Anywhere replatforming enables you to:

- Eliminate legacy hardware and software costs
- Exit your data center
- Right-size your workloads
- Realize your corporate cloud strategy by migrating Oracle
- Enhance service levels, security, performance and availability
- Refocus your people to drive greater business value
- Become a data-driven enterprise, by leveraging cloud-native analytics and artificial intelligence services

Database Freedom migrations enable you to:

- Drive down legacy database TCO, using new lower-cost alternatives
- Diversify your database strategy, by using the right technologies for the right workloads
- Align your choice of database platform to cloud-native development practices
- Improve business agility and reduce overheads by adopting a platform as a service (PaaS) strategy
- Achieve faster time-to-market for new products, services and geographies

<90 days

To meet an immovable strategic deadline, we delivered a rapid cloud migration of Oracle E-Business Suite for Arcosa.

3,000 hours

The annual amount of staff time Systemax has freed up to drive greater business value, as a result of moving its SAP system to the cloud.

20x faster

JetBlue's aircraft maintenance planning queries were reduced from five minutes to 15 seconds by migrating to an optimized private cloud.

Your journey at-a-glance

**Database™
Anywhere**

We will:

- Assess your existing workloads, using our RapidDiscovery process
- Choose the right cloud (or clouds)
- Architect your platform
- Move-and-improve your workload(s)
- Proactively manage your environment and workload

**Database™
Freedom**

We will:

- Assess your existing workloads, using our RapidDiscovery process
- Identify database technologies to meet your strategic and service level requirements
- Architect a suitable platform to run them on
- Move-and-improve your data
- Proactively manage your environment and workload
