

EPIC Track

A universal tracking solution designed for everyday and specific event tracking by linking people, places and things.

Added Value to Your ID Program

The EPIC Track Solution enhances any ID program by providing effective tracking of people, places and things. Identifying these elements with an ID system provides a basic level of security but by adding the ability to track activity of those identified and analyze the data collected, an organization's ID program becomes much more useful in terms of security and accountability. This more comprehensive ID program provides greater results through analysis of data collected and reported on. The flexibility to customize each tracking event makes this solution easily adaptable by any type of organization.

EPIC Track 2.2.8 Features

- > Easy to Deploy & Train Users
- > Configure Event Setup in Minutes
- > Countdowns & Count Threshold Limits
- > Support Apple, Android & Windows
- > Works On/Off-Line Anywhere
- > Cloud Hosted & Scalable
- > Identify Specific Locations
- > Assign Assets During Check-In/Out
- > Connect your SIS to Upload Data
- > Custom Data Fields
- > Instant Data Capture & Alerts at Check-In
- > Instant, Real-Time Data Shared at Checkpoints
- > Dynamic Reports Included

Easy Deployment

EPIC Track is Easy. It's software is intuitive, requiring minimal training and a smooth implementation throughout any organization. With EPIC Track, there are no servers to configure, it has a simple user interface, and contains prebuilt reports. It's basic design and customization options make EPIC Track the perfect tool for any number of tracking scenarios, making it a cost effective and value added solution.

EPIC Track can easily be integrated with mobile devices such as smart phones, handhelds, tablet PCs, and desktop PCs supported by Apple, Android and Windows operating systems. This out of the box tracking solution makes deployment simple, fast and successful every time.

Flexible Configuration

With EPIC Track, users aren't expected to be a programmer. Anyone with basic computer skills can easily configure powerful tracking scenarios or events, navigate through the interface, build reports, and be up and running within minutes. By opening Event Builder in your browser window users can choose from a series of drop down settings and connected lists to build individual event profiles within minutes. Choose from a selection of reports dynamically built from each tracking profile.

Status Check

Check real time status of activities in your event from anywhere.

Manage Users

Give users access to features they need without access to ones they don't.

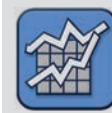

List Management

Build lists or connect to an existing databases containing people, places & things you want to track.

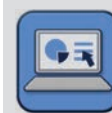

Tracking Events

Build custom tracking events quickly & easily with no custom programming.

Reports

Generate online reports dynamically built on customized tracking events.

Account Configuration

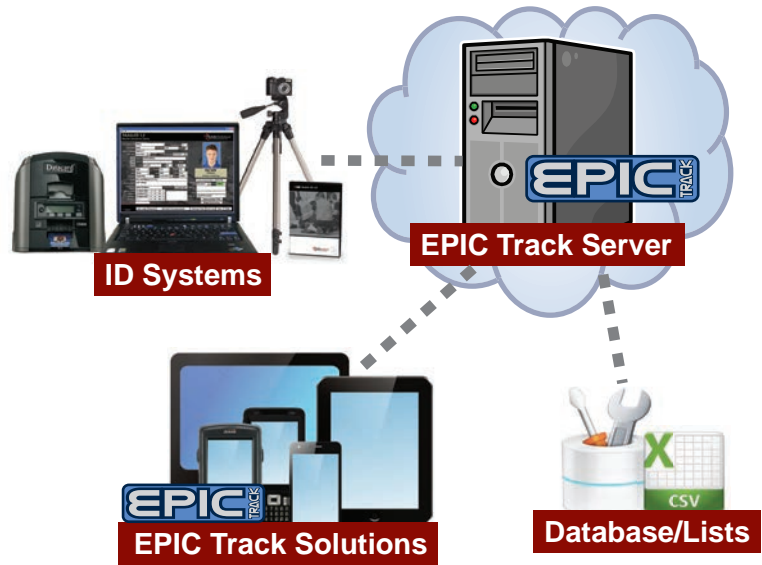

Approved Administrators may manage event settings and control visualized data.

A Uniquely Scalable Design

EPIC Track is an off the shelf tracking solution consisting of two components: EPIC Track Server and your choice of tracking solutions such as handhelds, smart phones, PCs and tablet devices. Each individual system is customized to include the EPIC Track Server and one or many of the other tracking devices. These components provide the flexibility for organizations to begin with a small tracking solution that could simply contain as little as one EPIC Handheld or EPIC Web device and a subscription to the EPIC Track Server Cloud. The flexibility of EPIC Track allows organizations to expand their system by adding an unlimited number of tracking devices all linking to the same EPIC Track Server as their needs grow.

Each EPIC Handheld comes pre-loaded with the EPIC Track software, allowing users to begin operating with minimal setup once access to the EPIC Track Server is established. The solution has the capability to support virtually all formats including 1D & 2D barcodes, QR tags, and MiFare, Moca and DesFire cards. The EPIC Track App is compatible with Apple, Android and Windows operating systems for the ultimate in flexibility.

EPIC Track Server is flexible and easy to use. With a cloud based design, there is no server install or configuration necessary. Data used to build lists in EPIC Track Server can come from existing ID Systems, CSV files, BadgePass, Mobile Solutions™, Mobile ID 1.0 or other ODBC source. This automated data acquisition provides a powerful foundation for tracking people, places and things.

EPIC Track Solution Components

Possible EPIC Track Applications

EPIC Track
Component 1

EPIC Track Server

- > Build/Connect/Import Lists
- > Build Tracking Events
- > Generate Reports
- > Muster/Status Solution

EPIC Track
Component 2

EPIC Track App

- > Scan People/Places/Things
- > Use Rugged Handheld & Smartphone
- > RFID Bluetooth Mobile Reader Compatible
- > Validate IDs
- > Cloud hosted and runs On/Off-line
- > View Photos of People, Places & Things

EPIC Mobile Web

- > Smart Phones, Tablet Devices, & PCs
- > Scan People/Places/Things
- > RFID Bluetooth Mobile Reader Compatible
- > Validate IDs
- > Requires Internet Access
- > View Photos of People, Places & Things

Education

- > Mustering
- > Field Trips
- > Athletic Events
- > Plays/Shows
- > Class Attendance

Government

- > Mustering
- > Training Attendance
- > Asset Check In/Out
- > Conference/Seminar Tracking

Corporate

- > Mustering
- > Event Tracking
- > Meeting Attendance
- > Conference/Seminar Tracking

Healthcare

- > Asset Check In/Out
- > Mustering
- > Certification Class Training
- > Station Attendance
