

EOS' ANTIMICROBIAL LIGHTS

Protected by Vital Vio's Patents

EOS' Antimicrobial Lighting is patented, EPA approved, currently installed and in use at Duke, UCLA, NY State Department of Health, Delta Airlines, Mount Sinai Hospital, among many others, with a plethora of white papers and studies regarding its efficacy (effectiveness as an antimicrobial) and its safety for constant and continuous use while humans are present.

Studies and white papers available upon request.

Continuous Sanitization While Humans are Present

A solution that can be implemented NOW

These fixtures are a powerful weapon in the fight against Covid-19. The start of a COVID-19 outbreak occurs when microbes carrying SARS COV-2 or the viruses themselves enter the human body through the mouth, lungs, or eyes. EOS' Antimicrobial lighting has been tested to halt microbial growth and ultimately destroy microbial colonies thereby preventing microbes from replicating and causing viral outbreaks.

EOS' Antimicrobial Lighting is a fraction of the cost for a sanitizing solution that is infinitely more effective than anything else available on the market.

1. *Patented technology that enables continuous sanitizing while humans are present— other sanitizing solutions are Band-Aids, the second the cleaning is done and humans re-enter, the space is contaminated again.*

2. *Sanitizing with EOS' Antimicrobial Lighting costs a fraction of what one would have to pay for human labor and sanitization products while providing far superior results.*

3. *EOS' comprehensive solution never takes a day off from sanitizing and is backed by a real warranty, with regular effectiveness check-ups. That's something you won't get from any cleaning company.*
