

Shooter Detection Systems to Showcase Gunshot Detection at ISC West

SDS returns to the industry's biggest show with innovations in security integrations and live fire product demonstrations

Rowley, Massachusetts – February 8, 2022 – Shooter Detection Systems (SDS), an Alarm.com (NASDAQ: ALRM) company, will return to the International Security Conference and Exposition (ISC West) at the Venetian Convention and Expo Center in Las Vegas March 23-25, 2022. SDS will feature live gunshot detection demonstrations at the show and will introduce attendees to new innovations in security integrations, software enhancements for enterprise-level deployments, and wireless/battery-powered gunshot detection solutions.

Enhancing Situational Awareness with Security Integrations

SDS has over 50 available security integrations with some of the biggest names in security, another reason why SDS is the top gunshot detection provider of choice for Fortune 500 enterprises, major city airports, top retailers, schools, and universities across the nation. The Guardian Indoor Active Shooter Detection System is a system of dual-mode acoustic and infrared sensors that detect and report on gunshot activity happening inside a building in real-time. As a standalone system Guardian automatically sends gunshot event and location information by SMS text, email, and floor plan mapping software to provide first responders and building occupants with critical information when every second counts. This situational awareness is expanded even further through SDS' third-party security integrations. Visit the SDS booth at the show to learn more about how SDS expands situational awareness by putting "eyes on" a shooting incident in progress, sending mass notification alerts, triggering audible and visual alerts, and more.

Live, Integrated Gunshot Detection Demonstrations

Visitors at the booth will be able to witness Live Fire Gunshot Detection Demonstrations of the Guardian product at the SDS Booth during the show. SDS will provide attendees a virtual, live view into a building where the Guardian System is installed and operational. Attendees will get a live look as a mock active shooter moves through the building in real-time, shooting blanks and triggering live shot alerts through the Guardian software and integrated video, mass notification and alarm systems. Demonstrations are open to all ISC West attendees and will be happening on Wednesday, March 23 and Thursday March 24 at 11am and 2pm local time in Booth #28065.

SDS will showcase live fire gunshot detection demonstrations at ISCW 2022.

Attendees are invited to visit SDS at their Booth #28065 during the show. To schedule a dedicated appointment with a gunshot detection specialist at the show contact sales@shooterdetectionsystems.com.

About Shooter Detection Systems

With over eight years of experience in the development and delivery of gunshot detection systems to commercial customers, Shooter Detection Systems (SDS), an Alarm.com (Nasdaq: ALRM) company, is a leading provider of patented gunshot detection solutions for schools, government buildings, transportation hubs, entertainment facilities and businesses of various sizes. The company's Guardian gunshot detection system is SAFETY Act Certified by the U.S. Department of Homeland Security, included in the Catalogue of Security Equipment of the Centre for the Protection of National Infrastructure (CPNI), and SL4 Certified by the Australian Government's Security Construction & Equipment Committee (SCEC).
