## Plott Labs Introduces ChatGPT to OneNet™ Emergency Management Platform

Alexandria, VA - Plott Labs, a leading provider of technology solutions for public safety, today announced the integration of ChatGPT, OpenAI's cutting-edge language model, into its OneNet Emergency Management Platform.

OneNet, hosted within Microsoft Azure Gov, is an emergency management platform designed to fully utilize the Microsoft Platform as a Service (PaaS) model. OneNet helps public safety organizations respond to emergency (9-1-1) and non-emergency incidents. With the integration of ChatGPT, OneNet now offers advanced natural language processing capabilities, allowing first responders and emergency management personnel to access critical information and take action, even in high-pressure situations.

"We are thrilled to bring the power of ChatGPT to OneNet, further enhancing the platform's ability to support public safety professionals in their critical missions," said Clifford D. Gandy, President of Plott Labs. "ChatGPT's advanced language processing capabilities will help streamline communication and improve decision-making, making it easier for emergency responders to access the information they need to save lives."

With ChatGPT, OneNet users can easily access information and make informed decisions, all through natural language chat. The platform's user-friendly interface and intuitive conversational flow make it easy for emergency responders, even those with limited technology experience, to quickly and accurately access the information they need.

OneNet is also designed to integrate with a wide range of emergency management tools and systems, including incident management software, GIS systems, and emergency notification systems. With ChatGPT integrated, OneNet offers a unified platform for emergency management, providing a single source of truth for emergency responders and enabling them to take immediate action.

“At Plott Labs, our mission is to empower public safety professionals with the tools they need to do their jobs more effectively and efficiently,” said John P. Plott, CEO of Plott Labs. “With the integration of ChatGPT into OneNet, we're taking another step towards that goal, helping to ensure that public safety professionals have the information they need, when they need it, to save lives.”

About Plott Labs:

Plott Labs specializes in software development, cloud hosting and cybersecurity compliance. Plott Labs provides innovative solutions to help government organizations including first responders and emergency management professionals respond to emergencies more efficiently and effectively. With a commitment to excellence and a deep understanding of the challenges facing government organizations, Plott Labs is dedicated to empowering government agencies with the tools they need to save lives.
