

An Oncology Study App Advancing Participant Engagement in Cell and Gene Therapy Trials

Rooted in feedback from real patients who have participated in complex cancer trials.

Making Clinical Trials Easier and More Accessible for Patients and their Support Networks

Cell Tracker: Patients can monitor their clinical trial journey from the moment their cells arrive to the lab, so they can prepare for next steps in their treatment pathway.

Messaging and Video Capabilities: Support flexible communication between the patient and site, from the comfort of home.

Connecting the Support Network:

Enable caregivers to join the app so when a patient is undergoing active treatment, their caregiver can receive all the same important information.

GRYT Health Patient Panel Testimonials:

"I love this! It has everything. I'm a big fan of the calendar plug in so you can add it to your phone or computer calendar with ease. I use my digital calendar for everything. The colors are also welcoming and peaceful."

[Support Network] "This is a great feature to have. It definitely would make things easier for caretakers. My wife and my mom definitely could've benefitted from using this program. I also like the control access part so that you can let someone simply view your records without worrying about them accidentally messing something up."

****All CAR T-Cell patients on the panel universally gave the highest scores based off their experience in other clinical trials.**
